Visit Start Date: 06/24/2019

Service Date: 06/24/2019

Author: Richard B Chalker, MD

Clinic Note

This patient was worked into my schedule today at the request of Dr. Kushlan to discuss diagnostic bronchoscopy.

He is a high functioning 82-year-old with a history of squamous cell lung cancer with tracheal involvement in the past, currently stable and essentially asymptomatic. On no therapy. He is being monitored closely.

He recently had an episode of minor hemoptysis. Because of this, Dr. Kushlan has asked for endobronchial evaluation to see if there is any evidence of recurrence within the trachea. This would alter his treatment plan.

He has had no further bleeding and at this time has no respiratory or systemic complaints.

Of note, he is on Xarelto, last dose 06/20/2019, 3:00 p.m.

His most recent chest x-ray from 06/20/2019, is unchanged from baseline showing a moderate sized right pleural effusion with some volume loss and subtle nodular opacities in the right upper lobe.

PHYSICAL EXAMINATION: Today a well-appearing gentleman who does not cough at all. He has decreased breath sounds at the right base consistent with the above chest x-ray findings. The left lung is clear. Extrathoracic trachea is midline without stridor. He has a bruise on his right shoulder after some minor trauma. Oropharyngeal exam shows a class 1 airway. Lower extremities, no edema. The remainder of the exam was deferred.

On 06/20/2019, his CBC is normal including platelets of 201K.

IMPRESSION:

1. Minor self-limited hemoptysis - on Xarelto.
2. Incurable metastatic squamous cell lung cancer, with tracheal involvement in the past, currently asymptomatic.

Christenson, Alan (MR # 56462699) DOB: 07/21/1936 Encounter Date: 06/24/2019

PLAN: We discussed the indication, risks and alternative of bronchoscopy. He understands and wishes to proceed. He will hold his Xarelto. His bronchoscopy is scheduled for 06/26/2019 at 4:00 p.m.

99204, 50 minutes face-to-face time, greater than 50% of the time spent in counseling regarding the above respiratory issues.
