Surgical Procedure

Order: 616147125

Status: **Final result** Visible to patient: **Yes (MyHealth)**

Narrative

Performed by: **SHC**

Accession No: SHS-19-23672

SPECIMEN SUBMITTED:

ENDOBRONCHIAL BIOPSIES

DIAGNOSIS (MICROSCOPIC):

A. LUNG, RIGHT MAIN BRONCHUS, ENDOBRONCHIAL BIOPSY

-- MICROSCOPIC FOCUS SUSPICIOUS FOR RECURRENT/PERSISTENT SQUAMOUS CELL CARCINOMA (SEE COMMENT)

BERRY

COMMENT: H&E stained sections display 3 pieces of endobronchial tissue. The submucosa shows fibroelastotic degeneration. The overlying mucosa is variably preserved and shows respiratory type mucosa. There is one focus with markedly atypical cells. The findings are suspicious for recurrent/persistent squamous cell carcinoma but treatment-related alterations cannot be entirely excluded. Clinical correlation is recommended. If a definitive diagnosis is required, additional sampling is suggested.

CLINICAL HISTORY: Elderly male with history squamous cell lung CA with tracheal involvement. Now with minor hemoptysis

OPERATION: Bronchoscopy with endobronchial biopsies right main bronchus

OPERATIVE FINDINGS: not provided

CLINICAL DIAGNOSIS: Rule out recurrence of CA

GROSS DESCRIPTION: One specimen is received labeled with the

Christenson, Alan (MRN 16743072)

patient's name and medical record number.

The specimen labeled "endobronchial biopsies" is received in formalin and consists of multiple fragments of pink-tan soft tissue measuring 0.6 x 0.3 x 0.1 cm in aggregate. The specimen is filtered and entirely submitted in one cassette A1. Reboja (6/26/2019)

I have reviewed the specimen and agree with the interpretation above. GERALD J. BERRY, M.D. Electronically signed 6/28/2019 10:58 AM
