#### Narrative

INDICATION: Metastatic lung cancer

COMPARISON: 3/25/2019 CT chest, 1/15/2019 chest radiographs

FINDINGS: PA and lateral views of the chest were obtained. Cardiac silhouette partially obscured. Moderate right-sided pleural effusion and volume loss in right hemithorax overall unchanged. Subtle nodular opacities in right upper lobe grossly unchanged. No definite consolidation in left lung. No evidence of pneumothorax. Degenerative changes in the thoracic spine.

#### Impression

IMPRESSION:

No significant interval change.
